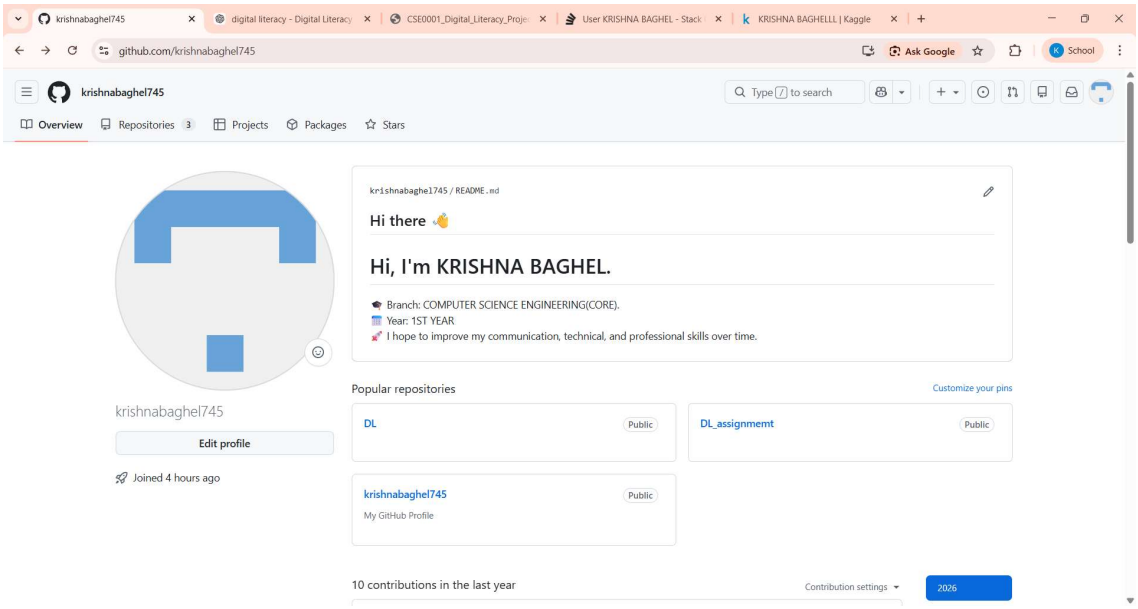
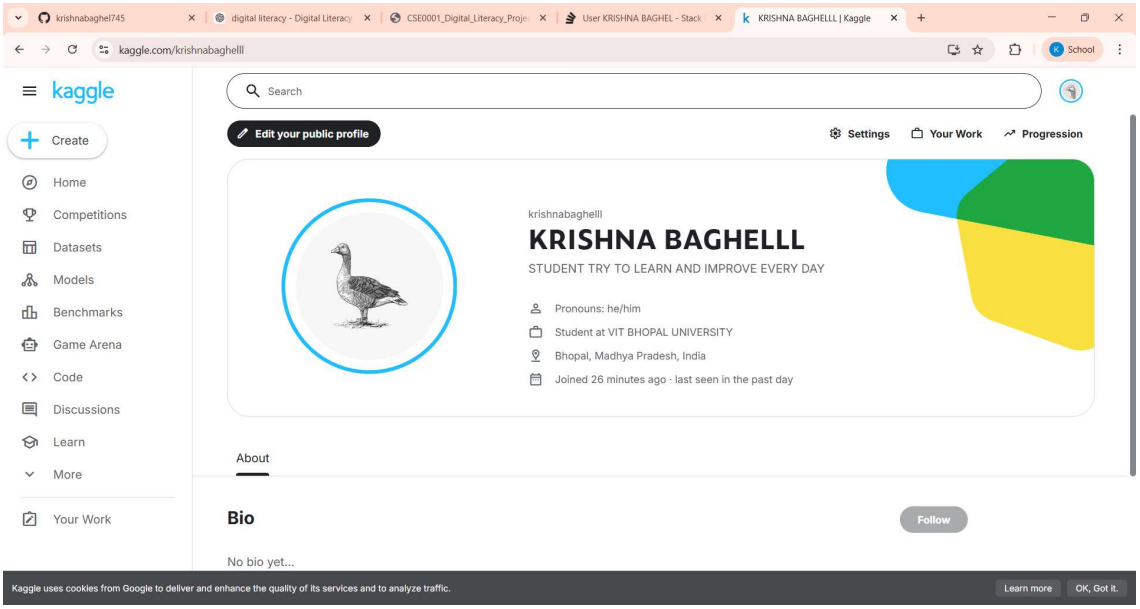
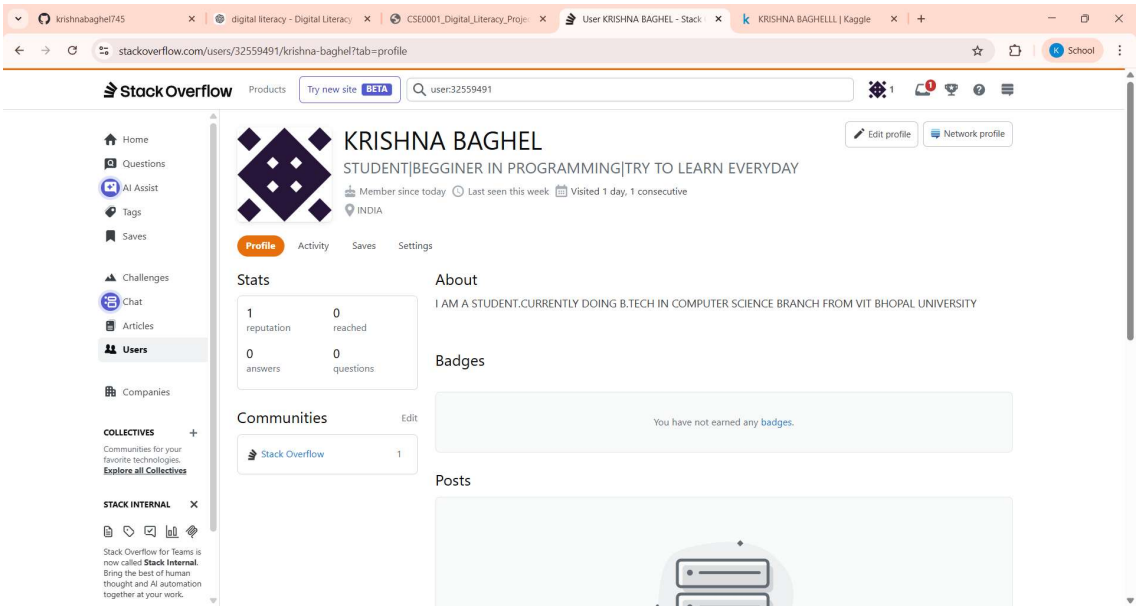
GIT HUB PROFILE



KAGGLE PROFILE



OVER STACKFLOW PROFILE



Report (Digital Portfolio)

For this task, I created my student digital portfolio using three platforms: GitHub, Kaggle, and Stack Overflow. These platforms are widely used by students and professionals to build an online presence and showcase their skills.

GitHub is mainly used for storing and managing projects. I created a profile README where I introduced myself, mentioned my branch and year, and described my learning goals. Kaggle is a platform for learning data science and working with datasets, and I created a profile with a short bio to begin exploring it. Stack Overflow is a community where developers ask and answer technical questions, and I set up my profile with basic information.

Over the next four years, I plan to regularly update my GitHub with projects, explore Kaggle to improve my data skills, and use Stack Overflow to learn from real-world coding problems. This task helped me understand the importance of maintaining a professional digital presence for future academic and career opportunities.
